

Point Paper #7 DPW yard

The yard has had several upgrades in the last two years. We added a sign shop, removed the fuel tanks, replaced the blue storage building with a clear span and painted $\frac{3}{4}$ of the building. A new roof was installed and we are working toward update the building's electrical system. We are currently building a new office building which will house the Engineering Department and the Administration. The building is scheduled to be delivered June 22, 2018. The yard is a mess. The plan is to remove the abandon railroad spur and to reset all of the drainage utilizing the Maple Brook funding. At the yard we have several issues with drainage and it all drains into the Maple Brook Culvert. The new building will require some new sidewalks and ramps and that we be done in house. Finally we are working with the Prisoners to finish painting the building. The paint and supplies are being purchase from FY18 funds.

These are all significant improvement and the focus needs to be changed to the inside. For example the electrical.
