

## **Point Paper #8 Leyden Woods Pump Station**

This project scare me. This pump station was installed in 1968 or so. The company that built it went out of business in the early 70's. Parts are nearly impossible to get. When it fails we will have to hire septic trucks to haul the waste 24/7 until a new system or repair can be done. The last bid price was \$550,000 and that was two years old. We also bid it with two other stations so we got a volume discount. Talking with other engineers the prices have risen by 20% or more this year. By the time we bid this out next year I am afraid the price will be \$750,000 or more. It is designed and can be put out to bid next spring. This is an extremely high priority
